PROFILE SUMMARY

Flutter Developer with 2+ years of experience building scalable, production-ready mobile applications. Specialized in Clean Architecture, performance optimization, and CI/CD automation. Contributed to backend systems using Node.js and Firebase, delivering high-impact features used by real users. Expanding into native Android (Jetpack Compose).

WORK EXPERIENCE

Flutter Developer, Taaly — Netherlands · Remote | 12/2023 – 03/2025

- Migrated state management from Riverpod to Bloc and **applied Clean Architecture**, reducing bugs by 25%.
- Automated **CI/CD** pipelines using **GitHub Actions and Fastlane**, cutting manual deployment time by 40%.
- Optimized memory consumption by 30% through advanced image handling and **lazy loading** strategies.
- Cut API latency and costs by 35% through strategic **pagination** and local caching.
- Contributed to the Node.js and Firebase Cloud Functions codebase, resolving **urgent production bugs**.
- Led the implementation of **VoIP push notifications** for iOS, forking and customizing a **native CallKit** package to support full-screen UI with caller name and avatar.
- Implemented end-to-end UI testing using **Patrol**, covering the full user flow across Android and iOS, with a CI pipeline built on GitHub Actions and **Firebase Test Lab**.
- Delivered **native-first architecture** (Swift/Kotlin) with Flutter as UI layer, integrated via platform channels.

Flutter Developer, DATAI — South Africa · Remote | 04/2023 – 12/2023

- Architected and shipped features for a large-scale **Flutter Web** platform.
- Built modular screens and controllers using **GetX** for state management, DI, routing, and role-based navigation.
- Integrated **REST APIs** using Dio with token-aware handling, centralized errors, and reusable service layers.
- Built **responsive layouts**, pagination, messaging, notifications, and **PDF reporting** for operational workflows.
- Maintained high code quality through regular technical **code reviews** and enforcement of SOLID principles.

PROJECTS

Salat Aljanaza (Freelance)

Location-based mobile application for discovering nearby funeral prayer gatherings and receiving real-time alerts — **10K+ downloads on Google Play**.

- Implemented **geolocation-based filtering** to surface nearby janazah events within a 5 km radius.
- Integrated **Mapbox** for map rendering, place search, and location selection during event creation.
- Built **Firebase-based features** for authentication, Firestore data management, and FCM push notifications.
- Developed **admin tools** for tracking platform activity, promoting admins, and managing posted prayers.

Tech: Flutter, Bloc/Cubit, Firebase, Mapbox, Geolocation, Push Notifications

Live Score

Real-time football application with scalable architecture and optimized state management for handling live match data — **82 stars, 43 forks on GitHub**.

- Built feature-based modules using **Clean Architecture** and repository pattern.
- Implemented **Cubit** state management with selective rebuilds (buildWhen) and real-time match refresh.
- Designed a robust networking layer using **Dio**, interceptors, and connectivity-aware error handling.
- Developed **end-to-end match detail flows** for fixtures, events, lineups, and standings.

Tech: Flutter, Bloc/Cubit, Dio, GetIt, GoRouter, REST APIs

Social Media App

Feature-rich social media platform with real-time interactions, media sharing, and shopping — **13 stars on GitHub**.

- Built **modular features** including feed, stories, reels, chat, search, and profile management using **Bloc/Cubit**.
- Integrated **Firebase services** for authentication, Firestore data handling, media storage, and token registration.
- Developed **media workflows** for uploading images and videos across posts, reels, stories, and chat.
- Implemented an **e-commerce module** with Amazon scraping and HTML parsing for product discovery.

Tech: Flutter, Bloc/Cubit, Firebase, Hive, Web Scraping, HTML Parsing

SKILLS

Mobile Development: Flutter, Dart, Bloc/Cubit, Riverpod, Flutter Web
Backend & Integration: Firebase, Supabase, REST, GraphQL, Node.js, Cloud Functions, FCM
Architecture & Quality: Clean Architecture, SOLID, OOP, Design Patterns, Testing, Performance Optimization
Tools & DevOps: Git, GitHub, CI/CD (GitHub Actions, Fastlane, Codemagic), DevTools, App Deployment

EDUCATION

Bachelor of Computer Science
Faculty of Computers & Artificial Intelligence, Beni Suef University 2020 – 2024
GPA: 3.18 / 4.0

LANGUAGES

Arabic — Native English — Professional Working Proficiency
